Filed: October 4, 2001

Art Unit: 2136

For: METHOD AND SYSTEM FOR PROVIDING
SECURITY TO A CLIENT SERVER
OPERATING A BROWSER

Examiner: E. A. Shiferaw

INTERVIEW SUMMARY

MS Amendment
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Dear Sir:

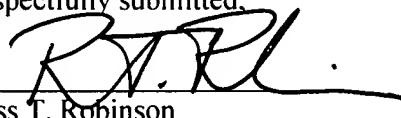

Ross Robinson and David Lovell participated in a phone conference with Examiner Shiferaw on Wednesday, April 18, 2007 concerning Patent Application No. 09/971,717. The discussion focused on the Examiner's position that U.S. Patent Application Publication No. US2005/0086295 to Cunningham et al. ("Cunningham") teaches the claim 1 feature of executing the interactive software application in the browser on the client computing system, the interactive software application being in communication with at least one element that is outside the browser and on the client side of the client side firewall. Also discussed was the Examiner's position that U.S. Patent No. 6,804,783 to Wesinger et al. ("Wesinger") teaches the claim 1 feature wherein the communication between the interactive software application and the at least one element occurs after the loading of the interactive software application and exclusively on the client side of the client side firewall. No agreement was reached.

In view of the above amendment, Applicant respectfully submits that the present application is in condition for allowance. A Notice to that effect is respectfully requested.

Dated: May 10, 2007

Respectfully submitted,

By

Ross T. Robinson
